Dear AppFolio Hiring Team,

I spent seven years building compliance-critical software for affordable housing at Entrata - the exact same domain AppFolio's team is working to transform. I know this space well: the recurring certification and recertification cycles, the income limit tables that shift annually across thousands of jurisdictions, the PHI constraints that govern every data movement, and the property managers who struggle to keep pace when regulations change mid-lease. I want to bring that depth to AppFolio and help build software that makes affordable housing compliance genuinely effortless.

At Entrata, I owned the HUD income-limit compliance ETL pipeline end-to-end for six years - **180,000 records processed annually with zero compliance violations**. I built LIHTC certification tracking dashboards that property managers used to monitor certification status, eligibility, and regulatory submission readiness across their portfolios. I engineered the PHI-compliant AWS S3 data migration when Entrata moved off legacy storage - Libsodium encryption, 100% data coverage, no incidents. These weren't one-time projects; they were systems I maintained through annual HUD limit updates, program transitions, and regulatory edge cases that don't show up in any spec document. I've seen how quickly this domain gets complicated, and I know how to build for that complexity.

Beyond domain expertise, I bring modern full-stack engineering practice: Python, PHP/Laravel, and Java on the backend; React and TypeScript on the frontend; PostgreSQL, AWS, Docker, and Kubernetes throughout. Currently at Intuit, I'm integrating Anthropic Claude into production financial services - building AI workflows, evaluation infrastructure, and guardrails. I'm actively exploring how AI can accelerate compliance workflows: automated document parsing, anomaly detection across certification data, and intelligent prompts to guide property managers through complex regulatory decisions. This is the direction I want to take AppFolio's affordable housing platform.

Affordable housing compliance is genuinely hard, and the consequences of getting it wrong fall on residents. I care about this problem, and I have the domain knowledge and engineering depth to make a real impact on your team. I'd welcome the opportunity to discuss how I can contribute.

Sincerely,

Venkata Lakshmi Parimala Pasupuleti
