SUMMARY

Full-stack engineer with **7+ years building and shipping production features end-to-end** in large-scale real estate and PropTech SaaS - now adding AI-enabled capabilities at Intuit. At Entrata (100K+ MAU multifamily marketplace), owned features across **React, TypeScript, Node.js, Python, Java/Kotlin, GraphQL, PostgreSQL, and AWS** in a high-volume transactional environment: from design through deployment, production debugging, and continuous improvement. Brings the same **distributed systems depth** (event-driven architecture, RabbitMQ async, Docker microservices on Kubernetes) that high-volume real estate platforms require. Now building **LLM and generative AI features** at Intuit: RAG pipelines, agent orchestration, LLMOps CI/CD - the AI angle this role is adding to its engineering stack. Built **Leasel** (8-agent LangGraph system for real estate/housing domain) and **AgentProbe** (multi-provider LLM evaluation platform). Strong in **React, TypeScript, Node.js, Kotlin, GraphQL, AWS, Kubernetes, automated testing, and CI/CD**. M.S. Data Analytics Engineering, George Mason University (GPA 3.87, May 2026).

CORE COMPETENCIES

React / TypeScript / Node.js / GraphQL | Kotlin / Java / Python / REST APIs | AWS (S3, EC2, RDS, Lambda, SQS, Bedrock) | Docker / Kubernetes / Terraform / GitHub Actions CI/CD | Microservices & Event-Driven Architecture | Distributed Systems & High-Volume Transactions | Automated Testing (Unit, Integration, E2E) | Relational & NoSQL Data Stores | LLM / Generative AI / RAG Pipelines | Agent & Workflow Automation (LangGraph) | PropTech / Real Estate Domain | End-to-End Feature Ownership & Production Support

EXPERIENCE

Intuit

Jun 2026 -- Present

Software Engineer - Full-Stack & AI Features - Virginia, USA

- Build **AI-enabled features** end-to-end: LLM integrations (Anthropic Claude), RAG pipelines, agent and workflow automation (LangGraph), and conversational interfaces for financial workflows - owning design, build, test, and production support.
- Implement **LLMOps CI/CD**: automated evaluation pipelines (LLM-as-judge + golden datasets) wired into GitHub Actions so quality regressions are caught before deploy, not after.
- Build cloud-native services on **AWS with Docker and Kubernetes**; containerized Python/FastAPI microservices with observability, logging, and production monitoring.
- Add **security controls and guardrails** for AI features: input validation, PII filtering, and fallback handling for regulated financial data environments.

Entrata - Multifamily & Affordable Housing SaaS

Oct 2020 -- Jul 2024

Senior Software Engineer - 100K+ monthly active users · High-volume real estate transactions

- Delivered **20+ full-stack features end-to-end** - React, TypeScript, PHP/Laravel, Java/Kotlin, Node.js, GraphQL, PostgreSQL - from design and development through automated testing, deployment, and production support without handoffs.
- Built **event-driven distributed systems**: RabbitMQ async processing for high-volume rent and financial updates across thousands of tenant records (idempotency, retry logic, dead-letter handling); AWS microservices on Docker/Kubernetes with Terraform IaC.
- **Debugged real production problems** end-to-end: owned triage calls for customer-reported issues, traced failures across distributed systems and stored procedures, wrote root cause summaries and drove fixes to closure - the same production ownership this role requires.
- Wrote **automated test coverage** at unit, integration, and API levels wired into CI/CD; optimized 200+ SQL queries (30% gain); reviewed 300+ pull requests.

Entrata India

Sep 2018 -- Oct 2020

Junior Software Engineer - Pune, India

- Built full-stack property management modules (Python, PHP, Java, PostgreSQL, React); delivered large-scale data import and reconciliation pipelines (1.6M records).

PROJECTS

Leasel - AI-Enabled Platform for Real Estate / Housing Domain

Python · LangGraph · FastAPI · RAG · TypeScript · React · LLMOps

End-to-end AI-enabled application for housing/real estate compliance workflows: **8-agent LangGraph orchestration**, retrieval-augmented generation (hybrid search + semantic reranking), structured output validation, and **human-in-the-loop escalation** for regulated decisions. Full-stack: FastAPI backend, React-compatible frontend. **LLMOps evaluation harness** wired into CI/CD: 93.6% precision, 87.9% F1 across 1,240 test cases. Directly relevant to Auction.com's AI feature roadmap.

AgentProbe - Multi-Provider LLM Evaluation Platform

Python · FastAPI · LangGraph · Node.js · 5 LLM Providers · CI/CD

15-endpoint FastAPI service integrating five LLM providers with **generative AI evaluation**: factual accuracy, hallucination rate, retrieval quality, and compliance. Automated **regression testing pipeline** (GitHub Actions + golden datasets) that catches quality drops before they reach production. Demonstrates the LLM and agent workflow automation capabilities this role is actively building.

github.com/venkatalakshmiparimala/AgentProbe

AI on FHIR - Full-Stack Clinical App

React · TypeScript · Flask · Python · Docker · BERT · REST APIs

Full-stack web app: **React/TypeScript frontend** + Flask/Python backend that translates natural-language questions into FHIR REST API calls using LLMs, BERT embeddings, and spaCy NLP. Role-based access control for HIPAA-style data isolation. Containerized with Docker. Demonstrates full-stack ownership from UI through API through AI layer.
