Dear CheckWriters Team,

I'm applying for the AI Solutions Engineer role because you're doing something specific I've built toward: deploying **Claude-based agents** to make internal teams faster. I've been doing exactly that at Intuit - identifying process opportunities with business stakeholders, building Claude integrations in Python/FastAPI, and measuring adoption after launch. AgentProbe, my open-source evaluation toolkit, integrates Anthropic Claude alongside four other LLM providers and is live on GitHub if you'd like to see the implementation directly.

Before Intuit, I spent **7+ years at Entrata**, a 100K+ MAU multifamily SaaS platform, working across the full client journey: onboarding workflows, client-facing integrations with federal data sources (HUD, Tax Credit), and support tooling that reduced issue triage time by 40%. I collaborated with sales, product, and client teams throughout - translating business problems into technical solutions and explaining tradeoffs to non-technical stakeholders. That's the same cross-department collaboration your SE role calls for.

On the reporting side: my M.S. in Data Analytics Engineering and the CrashClarity dashboard project (104K records, interactive reporting for non-technical audiences) cover the **insights and visualization work** you need for operations leaders.

Demo: github.com/venkatalakshmiparimala/AgentProbe

I'd love to talk about how I can build for your GTM and RevOps teams.

Sincerely,

Venkata Lakshmi Parimala Pasupuleti
