SUMMARY

Full-stack software engineer with 6+ years delivering production-ready features across frontend, API, and data layers in regulated housing environments. Spent 6 years at Entrata building the software infrastructure behind affordable housing and HUD compliance -- React/TypeScript frontends, PostgreSQL-backed APIs, and data pipelines handling sensitive resident information for 100K+ users. Experienced working in small teams with high ownership, end-to-end delivery, and code review responsibilities. Currently at Intuit building Python/FastAPI services on AWS. Strong in TypeScript, React, PostgreSQL, REST/GraphQL APIs, data privacy, and secure development. M.S. Data Analytics Engineering, George Mason University (GPA 3.87, May 2026).

CORE COMPETENCIES

TypeScript / JavaScript | React / Redux | PostgreSQL | GraphQL / REST APIs | Supabase | Python / FastAPI | Node.js | Data Privacy & PHI Security | Role-Based Access Control | End-to-End Testing | CI/CD (GitHub Actions) | AWS (S3, Lambda, RDS) | Docker | Database Schema Design | Agile / Small Team Delivery | Code Review & Mentoring | LLM Integration (Claude, OpenAI) | Accessibility Standards

EXPERIENCE

Intuit

Jun 2026 -- Present

Software Engineer -- Virginia, USA (Hybrid)

- Build Python/FastAPI backend services and **React/TypeScript frontends** on AWS, shipped through GitHub Actions CI/CD with Docker containerization.
- Design REST API contracts with structured-output schemas and validation; build and maintain **PostgreSQL data models** for financial data services.
- Implement **input validation, sensitive-data handling, and role-based access** patterns for financial data; instrument services with Prometheus and OpenTelemetry.
- Integrate LLM capabilities (Anthropic Claude) into production services with guardrails and eval harnesses to catch regressions before release.

Entrata -- Affordable Housing & Property Management SaaS

Oct 2020 -- Jul 2024

Senior Software Engineer -- Multi-tenant platform, 100K+ monthly active users

- Delivered **20+ production features end-to-end** across React/TypeScript frontends, PHP/Python/Java APIs, and PostgreSQL data models -- from initial scoping through release and production support.
- Designed and evolved **PostgreSQL database schemas** for eligibility, lease, financial, and compliance workflows; optimized 200+ SQL queries via execution plan analysis (30% performance gain).
- Built and maintained **secure data pipelines for sensitive resident data** (HUD income limits, PHI) with Libsodium encryption, role-based access control, and multi-tenant data isolation.
- Owned the annual HUD income-limit import end-to-end for 6 years -- transformation logic, validation, rollback preparation, and post-release monitoring across ~180,000 domain records. Zero compliance violations.
- Led AWS S3 document migration for Affordable Housing module; created **56 state-specific housing certification documents** via automated merge-field pipelines.
- Reviewed **300+ pull requests**, mentored junior engineers, contributed to shared application patterns and coding standards.

Entrata India

Sep 2018 -- Oct 2020

Junior Software Engineer -- Pune, India

- Built property management modules (Python, PHP, Java, PostgreSQL) for affordable housing rental workflows including lease management, eligibility, and tenant communication.
- Delivered large-scale data reconciliation workflows processing 1.6M HUD/Tax Credit records with validation and rollback checks.

PROJECTS

Leasel -- Housing Compliance Platform

Python · FastAPI · React · PostgreSQL · LangGraph

Full-stack housing compliance platform -- FastAPI backend, React frontend, and PostgreSQL data layer. Document ingestion (OCR), lease clause extraction, compliance Q&A with cited answers, and human escalation for regulated decisions. Role-based access control enforced so eligibility and financial decisions always route to staff. LLM-as-judge CI harness: 93.6% precision across 1,240 test cases.

github.com/venkatalakshmiparimala/Lease_complaince_rag

AI on FHIR -- Clinical NLP API

Python · Flask · React · TypeScript · PostgreSQL · RBAC · Docker

Full-stack application translating English/Spanish clinical questions into FHIR REST API calls. React/TypeScript frontend, Flask backend, PostgreSQL data layer, role-based access control for HIPAA-style data isolation. Containerized with Docker; automated testing suite covering API endpoints and access-control boundaries.

github.com/venkatalakshmiparimala/AI_on_FHIR

AgentProbe -- LLM Evaluation Toolkit

Python · FastAPI · TypeScript · GitHub Actions CI/CD

15-endpoint FastAPI backend with automated testing via golden datasets in CI. TypeScript-compatible API contracts; end-to-end regression tests for LLM output quality across five providers.
