SUMMARY

Data solutions engineer with **9+ years delivering large-scale data pipelines, SQL optimization, and cloud analytics platforms** in production enterprise environments. At Entrata (100K+ MAU multifamily SaaS), owned end-to-end data engineering: designed and delivered **Python/PySpark pipelines processing 1.6M+ records**, optimized 200+ SQL queries (30% performance gain), and built data reconciliation and validation workflows across Snowflake, PostgreSQL, and AWS. At Intuit, builds **cloud-native data services on AWS** with Python, FastAPI, and modern analytics patterns. Strong in **Python, SQL, PySpark, Snowflake, AWS (S3, Lambda, Glue, RDS), distributed data processing, data modeling, and data quality root cause analysis**. M.S. Data Analytics Engineering, George Mason University (GPA 3.87, May 2026).

CORE COMPETENCIES

Python / PySpark / SQL / Spark | Snowflake / Cloud Data Platforms | Data Pipelines & ETL / ELT Transformations | Distributed Data Processing & MPP Databases | Delta Lake / Apache Iceberg / Data Lakehouse | Data Modeling (Dimensional, Data Mapping, Lineage) | Data Quality & Root Cause Analysis | AWS (S3, Glue, Lambda, RDS, Redshift) | Query Performance Tuning & Optimization | GitHub Actions CI/CD & Agile Delivery | Large-Scale Analytics & Production Support | Cross-functional Collaboration & Technical Documentation

EXPERIENCE

Intuit

Jun 2026 -- Present

Software Engineer - Data & Analytics Solutions - Virginia, USA

- Build **cloud-native data services and analytics pipelines** on AWS: Python/FastAPI services, Snowflake integrations, structured data transformations, and reusable data assets for financial reporting and decision-making workflows.
- Implement **data quality controls and governance patterns**: input validation, schema enforcement, anomaly detection, and audit logging for regulated financial data environments.
- Design and deploy **scalable data solutions** following enterprise architecture standards; collaborate with product, analytics, and platform engineering teams through Agile delivery cycles.

Entrata - Multifamily & Affordable Housing SaaS

Oct 2020 -- Jul 2024

Senior Software Engineer - 100K+ monthly active users

- Designed and delivered **large-scale Python/PySpark data pipelines** processing 1.6M+ HUD and Tax Credit records: ingestion, transformation, validation, reconciliation, and rollback checks across distributed cloud data environments.
- **Optimized 200+ SQL queries** (30% performance gain) across PostgreSQL and Oracle; designed dimensional data models, data mappings, and metadata management for enterprise analytics datasets.
- Investigated **data quality issues end-to-end**: traced user-reported problems through complex pipelines, performed root cause analysis, implemented corrective actions, and documented findings for technical and non-technical stakeholders.
- Built and maintained **AWS data infrastructure** (S3, RDS, Lambda, SQS, Glue) with Terraform IaC and GitHub Actions CI/CD; designed async processing systems (RabbitMQ) with retry logic and error handling for high-volume data workloads.
- Wrote **Python/Bash automation** eliminating 80% of manual operational work; built internal debugging and data reconciliation tools adopted across teams; reviewed 300+ PRs.

Entrata India

Sep 2018 -- Oct 2020

Junior Software Engineer - Pune, India

- Built data import and reconciliation pipelines (Python, PostgreSQL) for affordable housing SaaS; delivered large-scale ETL workflows (1.6M HUD/Tax Credit records) with validation and rollback logic.

PROJECTS

CrashClarity - End-to-End Analytics Pipeline (104K Records)

Python · R · PySpark · scikit-learn · Dimensional Modeling · Dashboard

Built a full data analytics pipeline on 104K+ records: ingestion, cleaning, dimensional modeling, ML feature engineering (Random Forest + Logistic Regression, 85%+ accuracy), and an **interactive reporting dashboard** for non-technical audiences. Demonstrates end-to-end data solutions delivery from raw data through production-ready analytics.

github.com/venkatalakshmiparimala

Leasel - AI-Augmented Data Platform for Housing Compliance

Python · FastAPI · RAG · Snowflake · ETL · Data Quality

End-to-end data and AI solution: document ingestion pipelines, hybrid retrieval (TF-IDF + semantic search), structured output validation, and **data quality evaluation harness** (93.6% precision across 1,240 test cases). Demonstrates applying modern data platform patterns - ingestion, transformation, quality gates - in a production environment.
