SUMMARY

Forward-deployed engineer with **9+ years owning technical deployments end-to-end** - from scoping through proof of concept, trial, and production. At Intuit, serves as the **primary technical contact for AI tool vendors and enterprise stakeholders**: runs discovery, designs agentic AI solutions using Python and Claude, and drives each initiative to production while briefing non-technical stakeholders on tradeoffs and progress. At Entrata (100K+ MAU platform), owned **external vendor integrations with federal data sources** (HUD, Tax Credit) - scoping requirements, debugging REST APIs, managing go-live timelines, and resolving production incidents without handoff. Built **Leasel**: an 8-agent LangGraph agentic system with tool use, orchestration, RAG, and human-in-the-loop escalation (93.6% precision). Daily Claude Code user. Strong in **Python (Pandas), SQL, REST APIs, AWS, Docker**. M.S. Data Analytics Engineering, George Mason University (GPA 3.87, May 2026).

CORE COMPETENCIES

Forward-Deployed Technical Ownership | Agentic AI & LLM Orchestration (LangGraph) | Tool Use & Structured Outputs

Proof of Concept → Production Delivery | Python (Pandas) / SQL / REST APIs | External Vendor & Stakeholder Integration

Executive & Non-Technical Communication | RAG Pipelines & Retrieval Architectures | LLM Evaluation & LLMOps

AWS / Docker / Kubernetes / Terraform / GitHub Actions CI/CD | Snowflake / Databricks / Modern Data Platforms

PHI / HIPAA / Regulated Data Compliance | Daily Claude Code / AI-Assisted Development

EXPERIENCE

Intuit

Jun 2026 -- Present

Software Engineer - Forward-Deployed AI Solutions - Virginia, USA

- **Serve as primary technical authority for enterprise AI deployments:** lead technical discovery with business stakeholders, design agentic AI solutions, run **demos, proofs of concept, and trials** on customer data, define success criteria, and drive from pilot to production - briefing executives and non-technical stakeholders on approach, tradeoffs, and results throughout.
- Serve as **technical point of contact for AI tool vendors**: evaluate third-party APIs, scope integration requirements, align on data contracts, and drive delivery from discovery through go-live - partnering with TPMs and product managers throughout.
- Build **production agentic AI services** in Python/FastAPI: tool use, LLM orchestration, RAG pipelines, structured outputs, and Pandas-based data manipulation for financial workflows; daily Claude Code user.
- Design and run **LLM evaluation harnesses** (LLM-as-judge + golden datasets): measure accuracy, catch hallucinations, validate structured outputs before rollout; feed reusable patterns back into shared tooling.

Entrata - Multifamily & Affordable Housing SaaS

Oct 2020 -- Jul 2024

Senior Software Engineer - 100K+ monthly active users

- **Served as primary technical contact for external vendor integrations**: worked directly with HUD and Tax Credit federal data source teams to scope data requirements, debug REST API and data issues, coordinate go-live timelines, and resolve production incidents end to end - led triage calls and wrote root cause summaries for non-technical stakeholders including executives, PMs, and TPMs.
- Owned **end-to-end technical deployments** across 20+ concurrent workstreams: scoped integration requirements, designed Pandas/SQL data pipelines processing 1.6M+ records, validated against business outcomes, and maintained production stability - same pattern as FDE account ownership.
- Built **reusable internal tooling** from recurring patterns: Python/Bash automation eliminating 80% of manual operational work; debugging tools reducing triage time by 40%; standardized integration workflows across teams.
- Owned **PHI/regulated document infrastructure**: AWS S3 migration with Libsodium encryption, HIPAA-compliant access controls; optimized 200+ SQL queries (30% gain); Docker microservices on AWS with Terraform.
- Reviewed 300+ pull requests; mentored junior engineers; managed competing priorities across 120+ Agile sprints.

Entrata India

Sep 2018 -- Oct 2020

Junior Software Engineer - **Pune, India**

- Built housing SaaS integrations (Python, PostgreSQL); delivered large-scale data import pipelines (1.6M HUD/Tax Credit records) with validation and reconciliation.

PROJECTS

Leasel - 8-Agent Agentic AI System

Python · LangGraph · FastAPI · Tool Use · RAG · Human-in-the-Loop

Independently scoped and deployed an agentic AI system for lease compliance: discovery → proof of concept → production. **8-agent LangGraph orchestration** with tool use, state management, RAG retrieval, structured outputs, confidence scoring, and human escalation for low-confidence decisions - the LLM never makes final eligibility calls. LLM-as-judge evaluation harness: 93.6% precision, 87.9% F1 across 1,240 test cases. Demonstrates end-to-end FDE-style delivery of a production-grade agentic platform.

AgentProbe - Multi-Provider LLM Evaluation Platform

Python · FastAPI · 5 LLM Providers · LLMOps · CI/CD

15-endpoint FastAPI service integrating five LLM provider APIs (Anthropic Claude, OpenAI, Azure OpenAI, Groq, Ollama) with standardized structured output contracts. Evaluates factual accuracy, hallucination rate, retrieval quality, and compliance via LLM-as-judge with CI regression tests and golden datasets. Built as reusable evaluation substrate - same pattern as feeding capability gaps back to engineering.
