VP of Technology
Valiant Residential
Dallas, TX

Dear Hiring Manager,

I'm applying for the Senior AI Developer role. I spent **7+ years at Entrata** - the same platform you listed in your requirements - owning HUD compliance workflows, async rent processing across thousands of tenant records, and PHI-compliant resident data systems for affordable housing and multifamily properties. I know property management operations from the inside, and I'm now building production AI agents at Intuit. This role sits exactly at the intersection of those two things.

I built **LeaseI** - a production lease compliance AI platform - specifically in the property management domain: an 8-agent LangGraph workflow that ingests lease documents via OCR, retrieves over them with hybrid search, and routes regulated decisions (eligibility, financial) to staff via HITL guardrails. It ships with a CI eval harness (93.6% precision across 1,240 test cases) so I know exactly when agent behavior drifts. That project is the direct answer to what your JD describes: learn the workflow, scope the system, set the guardrails, build the eval, ship it, and stay with it. I also built **AgentProbe**, an open-source eval and observability platform with **Azure OpenAI** routing - your stack - alongside Anthropic, AWS Bedrock, and others.

What I bring that most AI engineers don't: I've seen Entrata workflows from the operator side. I know what a HUD income-limit import actually involves, why rent update processing has to be idempotent, and what happens when a compliance decision goes wrong. That context cuts the discovery phase significantly and means the AI I build fits how the work actually moves - not how it looks in a diagram.

I'd welcome the chance to walk through LeaseI and the Intuit eval harness in detail. Thank you for your time.

Sincerely,

Venkata Lakshmi Parimala Pasupuleti
