AppFolio — Machine Learning Engineer II (Leasing)

Dear AppFolio Team,

The leasing domain is harder than it looks from the outside. AMI thresholds, recertification cycles, HCV voucher calculations, waitlist priority rules — these aren't just business logic, they're the data your ML models run on. Most ML engineers who join AppFolio will spend their first quarter learning what a lease is. I spent **8 years building production systems on top of it**.

At Entrata, I automated income eligibility verification, AMI threshold calculations, and recertification workflows across **100K+ unit portfolios** — zero compliance violations across Section 8/HCV, LIHTC, and HUD. I also shipped the company's first production AI pipeline across **1.6M real financial records** with output validation, quality gates, and compliance controls in place at launch. That's not adjacent experience — that's the exact data environment your leasing AI features operate in.

I then built that same domain knowledge into **Leasel** — an agentic LangGraph RAG pipeline that audits residential lease PDFs across 10 compliance rules: **93.6% precision, 87.9% F1**, pass@k harness (pass@1 81.7%, pass@3 88.3%). Every compliance determination runs through a deterministic rules engine that keeps decisions fully auditable. It's the system I wish existed when I was writing income eligibility logic at Entrata — and it's directly analogous to what AppFolio is building with Realm-X and Lisa AI.

AgentProbe — github.com/venkatalakshmiparimala/AgentProbe — adds the eval layer: a 5-metric LLM-as-judge engine (factual accuracy, hallucination, retrieval quality, completeness, compliance) with CI/CD quality gates that block failing runs before production. Retrieval quality tracking, regression drift detection, latency monitoring across concurrent agent test suites — built because I learned the hard way that shipping AI features without eval infrastructure means finding bugs in production, not in tests.

You're building LLM and RAG solutions for leasing workflows I've been writing production code for since 2017. No ramp-up needed on the domain. I'd like to bring both the AI stack and the leasing depth to AppFolio's ML team.
