Fieldguide — AI Engineer

Dear Fieldguide Team,

When a CPA signs an audit opinion, they're staking their license on it. That's the bar **Field Agents** operate under — and it's what separates audit AI from every other AI application. Accuracy isn't enough. Traceability matters. Evaluation rigor matters. The gap between "impressive demo" and "a licensed auditor trusts it with client deliverables" is built on infrastructure most AI teams skip.

I didn't skip it. **AgentProbe** — github.com/venkatalakshmiparimala/AgentProbe — is a unified evaluation platform for agentic AI: a **5-metric LLM-as-judge engine** (factual accuracy, hallucination, retrieval quality, completeness, compliance), CI/CD quality gates that block failing runs before they reach production, and a React observability dashboard tracking per-run metrics, regression drift, and latency across concurrent agent test suites. I built it because the hardest problem in agentic AI isn't the architecture — it's knowing whether the agent is working when it matters.

Leasel, my agentic RAG pipeline, operates in the same compliance-critical domain Fieldguide targets. It audits 1,240 residential lease PDFs across 10 compliance rules: **93.6% precision, 87.9% F1**, pass@k harness (pass@1 81.7%, pass@3 88.3%). Every compliance determination runs through a deterministic rules engine that makes the decision traceable — not just accurate. Regulated professionals can't sign off on a black box. I built Leasel so they wouldn't have to.

At **Entrata**, I shipped the company's first production AI pipeline — Python, PyTorch, OpenAI API — across **1.6M real financial records**, with output validation, quality gates, and compliance controls in place before a single record went live. I also automated LIHTC, Section 8/HCV, and HUD compliance workflows across 100K+ unit portfolios, eliminating 80% of manual workload in a regulated, auditable environment. That production discipline — not just building AI, but making it defensible — is what I'd bring to Field Agents.

You're building AI that audit professionals trust with mission-critical decisions. That bar is higher than almost anywhere else in software. I've built the evaluation infrastructure, the compliance pipelines, and the production discipline to meet it. Let's build it at Fieldguide's scale.
