AppFolio — Staff Software Engineer, Investor/Owner

AppFolio and Entrata compete for the same property managers and owners. I spent 8 years inside Entrata building the products your Investor/Owner team builds — distribution reporting, financial statement generation, owner portal workflows, and affordable housing compliance across 100K+ unit portfolios. I know the persona cold, not from a job description.

A large share of your Investor/Owner users own tax credit and HUD-regulated properties. I built the compliance engine behind those portfolios. At Entrata I designed and shipped end-to-end systems for: **LIHTC (Tax Credit)** income eligibility — AMI threshold lookups by household size and county, set-aside elections (20/50 and 40/60 tests), annual and interim recertification workflows, qualified basis tracking, and 8823 noncompliance reporting to state agencies; **HUD Section 8 / HCV** — tenant income certification (HUD 50059), project-based Section 8 billing, housing assistance payment reconciliation, and subsidy layering compliance; and **mixed-income portfolios** — tracking tax credit units alongside market-rate inventory within a single property, enforcing the student rule, asset imputed income calculations, and the 30-year extended-use compliance period. All of it encoded into deterministic rules engines with full audit trails — zero compliance violations across 100K+ units.

On the engineering side: I owned 20+ production modules end-to-end serving 1M+ records and 100K+ MAU at 99.5% uptime. I led Docker containerization (50% execution speedup), an AWS S3/RDS/Glue migration (100% PHI compliance, zero incidents), and the company's first production AI pipeline on 1.6M real financial records with quality gates before any customer saw the output. I mentored 5+ engineers and drove 300+ code reviews across 7 years.

On the AI side: I built LeaseI — an agentic LangGraph RAG pipeline over 1,240 legal PDFs reaching 93.6% precision — and AgentProbe, an open-source multi-agent eval framework with a 5-metric LLM-as-judge engine and CI/CD regression gates. I don't just use AI tools — I build the systems that make AI outputs auditable in high-stakes compliance contexts.

The Ruby question: Python and PHP share the same dynamic OOP model and MVC pattern as Rails. Two weeks to functional, two months to fluent. The 8 years of LIHTC, HUD, and Investor/Owner domain expertise is what takes longer.

I'd like to bring that institutional knowledge to AppFolio.
