Hiring Team
Opendoor — Data Organization, Research & Development
Re: Agentic Analytics Engineer

COVER LETTER

I spent 8 years at Entrata — building the financial and operational systems that property managers use to run the portfolios Opendoor's buyers and sellers interact with. I know this real estate supply chain from the inside: owner financial reporting, leasing workflows, income eligibility data, compliance pipelines across 100K+ units. The customers Opendoor serves are the same property managers I spent 8 years helping. That's the domain knowledge your JD lists as a nice-to-have. For me it's the last 8 years.

On the AI agents side: **AgentProbe** is a 3-agent LangGraph runtime that surfaces outcomes without manual initiation — an Orchestrator dispatches autonomously to a RAG Tracer and Auto Fix agent based on real-time state, with CI/CD regression gates that fire on every commit and a React observability dashboard tracking per-run metrics without anyone querying it. That's the proactive intelligence model your JD describes: **agents that monitor and surface actionable insights without being asked**. It runs live at github.com/venkatalakshmiparimala/AgentProbe.

On **natural language interfaces and semantic layers**: LeaseI translates natural-language compliance queries into structured retrieval over 1,240 legal PDFs via a semantic layer built for LLM reasoning — 93.6% precision, fully auditable outputs. AI on FHIR translates English and Spanish natural-language queries into FHIR API calls via LLMs and BERT. Building the layer between human language and structured data is something I've done in two production systems.

On SQL: I optimized **200+ queries across all Entrata client environments**, cutting average query execution time 30% through execution plan tuning, index strategy, and join optimization. I'm PostgreSQL-native; Snowflake and BigQuery expose the same SQL surface on columnar storage — different optimizer, same fundamentals. dbt and Airflow are on my learning curve, not a barrier.

I'm in Virginia and happy to relocate to Seattle or Miami for the right role. This is it.

Sincerely,

Venkata Lakshmi Parimala Pasupuleti
