Re: GTM Engineer

COVER LETTER

Your GTM Engineer role is exactly where my Analytics Engineering background lands most naturally. I'm not a RevOps person who learned to code — I'm an engineer who has spent 8 years building data pipelines that move business metrics, including **Salesforce integrations, reporting automations, data sync pipelines, and API connections** linking product data to commercial systems, and **Clay and n8n enrichment pipelines** replacing manual spreadsheet workflows at Entrata. The distinction matters: I think in schemas and pipeline architecture, not in no-code workarounds.

The part of your JD that caught my eye was “deterministic AI engineering — structured prompt engineering to ensure LLMs reliably produce schema-compliant JSON from unstructured data sources before mapping to production databases.” I built exactly this. **Leasel** is a production pipeline that extracts structured, schema-compliant JSON from 1,240 unstructured residential lease PDFs using a deterministic rules engine that validates every LLM output before it touches the database — 93.6% precision, fully auditable. That same pattern — LLM call → structured extraction → validation gate → database write — is precisely what you need to sync Claap call recordings to Salesforce custom fields without data corruption.

On the compliance side your JD raises: I led a **100% PHI/PII-compliant** AWS S3 migration at Entrata (Libsodium encryption on all SSNs and phone numbers across the entire resident database, SOC2-aligned), zero security incidents, updated 50%+ of the codebase for compliance. GDPR/CCPA data governance in automated pipelines is not new territory. Rabbet is building in construction finance — a domain I know from 8 years on the real estate SaaS side. I’d be ready to move fast.

Sincerely,

Venkata Lakshmi Parimala Pasupuleti
