Hiring Manager
Student and HR Systems, Enterprise Technology
Stanford University, Redwood City, CA

Re: Senior Student Portal Developer -- Job ID 201102

I am applying for the Senior Student Portal Developer role on Stanford's Student and HR Systems team. The work described -- designing and developing enterprise-wide applications, leading complex projects independently, defining standards, mentoring engineers, and driving the long-term modernization of institutional systems -- is what I have been doing for nine years.

At Entrata, a multifamily real estate SaaS platform, I was a senior engineer and long-term owner of production systems at scale. I designed and delivered 20+ full-stack web-based modules serving 100K+ monthly active users, owned the complete SDLC for critical compliance systems, and built the kind of infrastructure that has to work every time -- multi-tenant PostgreSQL schemas, RabbitMQ async processing with idempotency guarantees, Libsodium-encrypted AWS pipelines with 100% PHI compliance, Docker microservices with measurable scalability improvements. I led peers through 300+ code reviews, mentored junior engineers, and set development and documentation standards for the team. **Nine years of this at production scale is the foundation I bring to Stanford's portal team.**

I do not have prior experience with Oracle Campus Solutions specifically. I want to name that directly rather than let it sit unaddressed. What I have done is become a deep technical owner of a large, complex, proprietary enterprise SaaS platform from scratch -- understanding its architecture, APIs, data structures, business processes, and development standards from the inside. I did that at Entrata over years, and I will do it again at Stanford. The JD asks for someone who can "quickly learn and adapt to new technologies" -- that is exactly how I have built my career. New platforms are an onboarding problem, not a capability problem.

I am currently a Research Associate at George Mason University completing my M.S. in Data Analytics Engineering (GPA 3.87, May 2026). Two years working inside an academic institution -- navigating faculty stakeholders, building research data infrastructure, and understanding how institutional IT serves a campus community -- has made me genuinely interested in this kind of work. The systems Stanford's portal team builds touch every student and faculty member at one of the world's most important universities. That scope matters to me.

Thank you for your consideration. I would welcome the opportunity to speak about how my background maps to what the team is building. My CV is enclosed.

Sincerely,

Venkata Lakshmi Parimala Pasupuleti
