Hiring Manager
Advancement Services, University of California Santa Barbara
Phelps Hall, Santa Barbara, CA

Re: Applications Programmer 3 — Advancement Services

I am writing to apply for the Applications Programmer 3 position in UCSB's Advancement Services division. With nine years of production experience owning enterprise database systems, multi-platform data integrations, and compliance-critical reporting workflows, I bring the operational depth and data systems discipline this role requires -- and I am genuinely drawn to the mission context: reliable, well-governed data infrastructure is what enables an institution's advancement programs to function.

The core of my career has been **long-term ownership of complex enterprise data pipelines under institutional and regulatory constraints**. At Entrata, I was the sole owner of the annual HUD income-limit data import -- a workflow that transformed thousands of federal regulatory source records into approximately 180,000 domain records powering eligibility, rent calculations, and tax-credit compliance for more than 100,000 housing units across multi-tenant environments. I defined the data mapping standards, transformation rules, and validation logic; conducted pre-import audits; managed deduplication and reconciliation; and maintained rollback capability before every annual release. Zero data integrity violations across seven years of ownership. The scale and compliance stakes of that work are directly analogous to what Advancement Services requires of its donor and alumni data systems.

I have nine years of production SQL/PL-SQL experience -- stored procedures, query optimization across 200+ queries, complex multi-tenant schemas, and database performance engineering. My primary relational database is PostgreSQL; Oracle's PL-SQL syntax and execution model are closely related, and I am prepared to close that gap quickly. I have also built and maintained integrations between internal CRM-class platforms and external third-party vendors, established monitoring and alerting protocols for data exchange pipelines, and built reporting frameworks delivering ad-hoc and scheduled analytics to operations, compliance, and business leadership teams. Tableau and Power BI are both in my toolkit. I understand that Advancement Services runs on systems like Ellucian Advance, and I am a fast learner on institutional platforms -- at Entrata I worked within a large proprietary multi-tenant SaaS platform and became one of its deepest technical owners.

I am currently a Research Associate and Graduate Teaching Assistant at George Mason University, completing my M.S. in Data Analytics Engineering (GPA 3.87, May 2026). Working inside a university has given me direct exposure to the pace, stakeholder expectations, and institutional culture of academic environments -- and it has reinforced how much impact well-maintained data infrastructure has on the programs that depend on it. I would bring that same care and long-term ownership mindset to UCSB's Advancement Services team.

Thank you for your consideration. I would welcome the opportunity to speak further about how my background maps to what you are building. My CV is enclosed.

Sincerely,

Venkata Lakshmi Parimala Pasupuleti
