Hiring Team

West Monroe

Senior AI Software Engineer -- Technology & Experience (TechEx)

Your job description asks for engineers who can "translate business needs into technical solutions" -- not describe how they would do it, but actually ship them. That is exactly what I did at Magizhs Tech Solution: an external client needed a production AI system, and I owned it from architecture through deployment. LLM selection, RAG layer over a regulatory corpus, prompt-engineered validation guardrails, and integration with their enterprise data sources -- all designed, built, and delivered end-to-end.

The AI stack West Monroe's TechEx practice runs on is the stack I build in. You mention "prompting and orchestration strategies for models such as GPT, Claude, and Gemini" -- I built **AgentProbe**, an open-source LLM orchestration platform that routes across exactly those providers (plus Groq and Ollama), with a CI-integrated regression gate, LLM-as-judge scoring, hallucination detection, and full agent tracing. It is the harness I use to prove that AI systems work before they go anywhere near a client environment. For intelligent agents and workflow automation, **Leasel** is the proof point: an 8-agent LangGraph system with RAG retrieval, structured data extraction, conditional routing, and human-in-the-loop guardrails on regulated decisions -- 93.6% precision across 1,240 test cases, with every final regulated call routed to deterministic logic or a human, never left to the LLM alone.

The full-stack production depth is at Entrata: seven years shipping Python, JavaScript/TypeScript, React, Angular, PostgreSQL, RabbitMQ, and AWS systems supporting 100K+ monthly active users across 120+ Agile sprints. I owned compliance-critical data pipelines (180,000 HUD records), led an AWS S3 migration with zero PHI incidents, and mentored 5+ engineers while conducting 300+ code reviews. That is the kind of engineering discipline a consulting firm needs in someone who will be building systems that clients depend on in production.

West Monroe builds real software. I build real software. I would welcome the chance to talk about what that looks like inside the TechEx practice.

Sincerely,

Venkata Lakshmi Parimala Pasupuleti
