PROFESSIONAL SUMMARY

AI engineer and evaluator with hands-on experience designing correctness criteria, scoring rubrics, and evaluation harnesses for LLM outputs. Built AgentProbe - an open-source AI eval toolkit with a 5-metric engine (correctness, groundedness, hallucination rate, latency, token efficiency), CI-integrated regression harness, and golden datasets - used to evaluate LeaseI across 1,240+ test cases. Use Claude, GPT-4, and Copilot daily for drafting, analysis, and structured reasoning. Understand AI failure modes from the inside: as both a builder who ships LLM systems and an evaluator who defines what "correct" means and measures when models miss it. M.S. Data Analytics Engineering, George Mason University (GPA 3.87, May 2026).

RELEVANT EXPERIENCE

Blue Horse Digital Sep 2026 – Present

AI/ML Engineer (Volunteer) · Remote

- Building ML models and data analysis pipelines; using Claude and GPT-4 daily for drafting, structured analysis, and reviewing AI-generated outputs for accuracy and alignment with business requirements.

Independent Projects 2025 – 2026

AI Evaluation & Rubric Design

- **AgentProbe** (open-source): Designed and implemented a 5-metric LLM evaluation framework with explicit correctness criteria for each metric — not "good output" but verifiable standards: groundedness requires citation to source, correctness requires factual match to golden answer, hallucination rate requires absence of unsupported claims. Built CI-integrated regression harness with golden datasets that blocks on quality drops. github.com/venkatalakshmiparimala/AgentProbe
- **LeaseI**: Authored evaluation scenarios over 1,240 lease PDFs spanning 5 US states — each test case defines the document context, the correct answer grounded in specific clauses, and the rubric distinguishing a supported conclusion from an unsupported one. Achieved 93.6% precision, 87.9% F1 via LLM-as-judge scoring with human calibration.

George Mason University Aug 2025 – May 2026

Graduate Teaching Assistant · College of Engineering and Computing

- Graded 600+ students' assignments using rubric-aligned feedback — designed rubrics that distinguished correct vs. partially correct vs. incorrect outputs with specific, checkable criteria rather than subjective quality assessments.
- Authored and reviewed technical task prompts; identified ambiguities in problem statements that would make correct solutions indistinguishable from incorrect ones, and revised for clarity and calibration.

George Mason University Aug 2024 – Aug 2025

Research Associate

- Verified that stated conclusions followed from underlying data across 3 research pipelines — applied Isolation Forest to surface anomalies that invalidated dataset assumptions before they propagated to conclusions; designed Tableau and Power BI dashboards that made data-to-conclusion traceability explicit for faculty reviewers.
- Built prediction models (R^2=0.977) on WHO and UK Road Safety datasets; documented evidence chains linking model inputs, methodology, and conclusions so findings could be independently verified.

Magizhs Tech Solution May 2025 – Aug 2025

AI/ML Engineer Intern

- Built compliance validation system serving marketing, real estate, and commercial survey stakeholders — authored task scenarios grounded in regulatory data where correctness was verifiable against FAA Part 107 source documents, not subjective.

Entrata (PropTech / Real Estate SaaS) Sep 2018 – Aug 2024

Senior Software Engineer · Remote

- Owned data pipelines where factual accuracy had direct financial and regulatory consequences — developed the discipline of defining correctness criteria precisely and verifying conclusions against source data before any output was trusted. Zero compliance violations across 7 years of regulated data processing.

EDUCATION

M.S. Data Analytics Engineering George Mason University, Virginia May 2026

GPA: 3.87

B.Tech Computer Science & Engineering JNTU Anantapur 2017

SKILLS

AI Tools: Claude (Anthropic API), OpenAI GPT-4, GitHub Copilot, Gemini — daily use for drafting, analysis, structured reasoning, and output review

Evaluation & Rubric Design: LLM Evaluation, LLM-as-Judge, Golden Datasets, Correctness Criteria Design, Hallucination Detection, Groundedness Verification, Pass@k Harness, Regression Testing, CI-Integrated Quality Gates

Data & Analysis: Python, R, SQL, Pandas, NumPy, Tableau, Power BI — data-to-conclusion verification, anomaly detection, statistical modeling

Writing & Communication: Technical documentation, rubric-aligned feedback, task prompt authoring, structured analysis, data-backed reporting
