Virginia, USA (open to NYC relocation)

PROFESSIONAL SUMMARY

Software engineer with 7 years building the accounting and compliance software that property managers rely on -- the exact workflows IronLedger is automating. At Entrata, owned the financial compliance engine driving rent calculations, HUD income limits, and AP workflows for 100K+ monthly users across thousands of multifamily properties. Built **Leasel**, an 8-agent LangGraph HITL platform that automates financial compliance investigation with cited evidence and human escalation on every financial decision. Currently deploying Anthropic Claude into financial data pipelines at Intuit -- grounding agent answers in source records and catching hallucinations before release. Strong in Python, AWS, Next.js, Vector DBs, and LangGraph. M.S. Data Analytics Engineering, George Mason University (GPA 3.87, May 2026). Case studies: Leasel · AgentProbe

CORE COMPETENCIES

Property Management Domain (7 yrs) | AI Agents (LangGraph, production) | Financial Compliance Automation | Vector DBs (ChromaDB / Pinecone) | Python (9+ yrs) | Prompt Engineering | AWS / Docker | Next.js / TypeScript / React | LLM Evaluation / Evals | RAG Pipelines | HITL Escalation Design | Full-Stack End-to-End Ownership

EXPERIENCE

Intuit

Jun 2026 - Present

Software Engineer · Virginia, USA

- Deploy Anthropic Claude into production financial data pipelines -- ground agent answers in customer financial records so every response traces back to the source, directly applicable to invoice processing and AP automation.
- Build CI eval harnesses (LLM-as-judge + golden datasets) that block hallucinations and quality regressions before every release -- the safety layer that makes financial agents trustworthy at scale.
- Design structured-output schemas and retrieval pipelines; add guardrails around LLM calls (input validation, sensitive-data handling, output checks) before downstream financial consumption.
- Build FastAPI backends and React/TypeScript front ends shipped via GitHub Actions CI/CD to AWS; ML pipelines with scikit-learn and XGBoost.

Entrata

Oct 2020 - Jul 2024

Senior Software Engineer · Multifamily SaaS, 100K+ monthly active users

- Owned the financial compliance engine for multifamily property management: HUD income limits, rent calculations, lease compliance, and AP workflows across thousands of properties -- the exact workflows IronLedger is automating.
- Maintained the annual HUD income-limit import for 7 years -- transforming federal source data into ~180,000 records driving eligibility, rent, and accounting compliance for 100K+ housing units; zero violations.
- Built RabbitMQ async processing for rent updates across thousands of tenant records; retry logic and idempotency eliminated double-processing -- reliable financial data at production scale.
- Ran Python/Bash automation cutting manual ops work by 80%; optimized 200+ SQL queries (30% performance gain); owned AWS S3 PHI migration (100% compliance, zero incidents).
- Delivered 20+ features end-to-end (Python, TypeScript, Java, React, PostgreSQL) across 120+ Agile sprints; owned production incident response.

Entrata India

Sep 2018 - Oct 2020

Junior Software Engineer · Pune, India

- Built property management accounting modules (Python, PHP, Java, PostgreSQL); delivered 1.6M HUD/Tax Credit record import workflows; led AWS S3 cloud migration.

PROJECTS

Leasel -- Financial Compliance AI Agent Platform

github.com/venkatalakshmiparimala/Lease_complaince_rag

8-agent LangGraph HITL system that automates financial compliance investigation for property management -- the direct parallel to IronLedger's accounting agents. Classifies issues, retrieves rules and case history from hybrid RAG, generates evidence-backed resolution paths cited to source, escalates every financial decision to a human. Code-enforced rule: LLM reasons, humans approve every regulated/financial call. LLM-as-judge CI regression harness keeps agent quality from drifting.

Python · LangGraph (8-agent) · FastAPI · Streamlit · ChromaDB · Hybrid RAG · SQLite · CI/CD · LLM-as-Judge

AgentProbe -- Open-Source LLM Evaluation Toolkit

github.com/venkatalakshmiparimala/AgentProbe

15-endpoint FastAPI backend routing across 5 LLM providers. 5-metric LLM-as-judge eval engine: factual accuracy, hallucination rate, retrieval quality, completeness, compliance. CI regression tests on golden datasets -- the eval infrastructure accounting agents need to stay reliable as data and models evolve.

Python · FastAPI · LangGraph · ChromaDB · Pinecone · GitHub Actions · Anthropic · OpenAI · Groq · Ollama

AI on FHIR -- Clinical NLP & LLM API Integration

github.com/venkatalakshmiparimala/AI_on_FHIR

LLM + BERT + embeddings translate English/Spanish questions into FHIR API calls -- reduced manual clinical lookup time by ~60%. HIPAA-compliant role-based access; Docker containerized.

Python · Flask · React · TypeScript · Docker · BERT · spaCy · LLMs · FHIR REST APIs

EDUCATION

M.S. Data Analytics Engineering — George Mason University, Virginia — May 2026

GPA 3.87 · NLP pipelines, fine-tuning (HuggingFace + PyTorch), anomaly detection, regression modeling (R^2=0.977)

B.Tech Computer Science & Engineering — JNTU Anantapur — 2017

TECHNICAL SKILLS

AI & Agents: LLM APIs (Anthropic Claude, OpenAI, Groq, Ollama), LangGraph, LangChain, RAG Pipelines, Hybrid Search, Vector DBs (ChromaDB, Pinecone, Weaviate), Prompt Engineering, Multi-Agent Orchestration, HITL, LLM-as-Judge Evaluation, Fine-tuning (HuggingFace, PyTorch), MCP

Languages & Web: Python (9+ yrs), TypeScript, JavaScript, Node.js, React, Next.js, Java, Spring Boot, PHP, SQL, Bash

Databases & Data: PostgreSQL, MySQL, MongoDB, Redis, SQLite, Snowflake, ETL Pipelines, Query Optimization

Frameworks & APIs: FastAPI, Flask, Django, Express, REST APIs, GraphQL, RabbitMQ, Kafka, Celery

Cloud & DevOps: AWS (S3, EC2, Lambda, Glue, SQS, API Gateway, IAM), Azure (OpenAI, AKS), GCP (Vertex AI), Docker, Kubernetes, Terraform, GitHub Actions CI/CD

ML: scikit-learn, XGBoost, PyTorch, PySpark, BERT, spaCy, HuggingFace, Prometheus, Grafana
