**Office of Faculty Affairs**
George Mason University — Fairfax, Virginia

## Faculty Affairs Data Analyst (Part-Time)

I am a recent George Mason University graduate (M.S. Data Analytics Engineering, GPA 3.87, May 2026) applying for the Faculty Affairs Data Analyst position. I have spent the past two years as a Research Associate and Graduate Teaching Assistant at GMU, supporting faculty stakeholders with data analysis, visualization dashboards, and institutional reporting - which is precisely the work this role describes.

As a **Research Associate** in the College of Engineering and Computing, I built multi-source statistical prediction models in Python and R across WHO and UK Road Safety datasets - 190+ countries, hypothesis testing, anomaly detection via Isolation Forest, and a full data cleaning and validation pipeline that reached **$R^2 = 0.977$** regression accuracy. I delivered findings through **Tableau, ggplot2, and Quarto** faculty leadership dashboards that improved research comprehension by 40% across two cohorts. Working directly with faculty stakeholders on analytical questions - understanding what they need to see, designing the right visualization, and communicating quantitative findings clearly - is work I have done here at Mason and am ready to continue.

Before GMU, I spent 8 years at Entrata managing financial data and compliance analytics at scale: processing **1.6M HUD and Tax Credit income limit records**, designing SQL data pipelines and audit systems for 100K+ unit portfolios, writing quantitative analysis on AMI thresholds and income eligibility - all with zero compliance violations. I am comfortable working with large, messy institutional datasets, translating regulatory requirements into data definitions, and producing reports that non-technical stakeholders can act on.

The Faculty Affairs analyst role sits at the intersection of institutional data, faculty-facing reporting, and academic administration - a context I know well from both sides: as a researcher who needed clean data and useful dashboards, and as the analyst who built them. I would bring that same precision and stakeholder focus to the Office of Faculty Affairs.

Thank you for considering my application. I would welcome the opportunity to contribute to GMU's faculty data work.
