September 9, 2026 · TheGuarantors · AI Solutions Architect

Dear TheGuarantors Hiring Team,

For seven years at Entrata, I was the human layer in the exact workflow your AI underwriting now automates at scale. I reviewed income documentation for LIHTC, HCV, and HUD certifications - detecting fake pay stubs, income misrepresentation, asset concealment, and household composition fraud across 100,000+ housing units. I then automated 80% of that manual review workload through production pipelines, with zero compliance violations over the entire ownership period. TheGuarantors is solving the same income and identity fraud problem I spent seven years fighting, just at a scale and speed that only AI makes possible. That is exactly why this role interests me.

I have since translated that domain knowledge into production AI systems. LeaseI is an 8-agent LangGraph workflow that automates housing compliance investigation - integrating document intelligence, regulatory rules, historical incident data, and live system state into a single investigation pipeline, with HITL guardrails blocking automated resolution of regulated eligibility paths. AgentProbe is the evaluation and monitoring infrastructure that keeps AI solutions auditable and reliable: a 5-metric quality engine, structured tracing of every AI decision, and a CI regression gate that blocks quality drift before deployment. At Magizhs, I was the sole technical owner embedding with an external client - translating ambiguous business requirements into a production AI system from discovery through deployment in weeks.

I understand the operational risk your customers face when a renter's income or identity doesn't verify cleanly. I understand the compliance constraints that govern how those decisions must be documented. And I know how to design AI workflows where the LLM reasons and structured logic decides - so that every outcome can be audited, explained, and defended. That is the architecture TheGuarantors needs as it scales AI underwriting to the 9 of 10 top multifamily operators already on the platform.

I would welcome the opportunity to discuss how my background in renter underwriting, income fraud detection, and production agentic AI aligns with what you are building.

Sincerely,

Venkata Lakshmi Parimala Pasupuleti
