Hiring Team
Yardi Systems - HUD Business Unit
Atlanta, GA

I am applying for the Software Development Engineer II position on Yardi's HUD team. For seven years at Entrata - Yardi's direct competitor in affordable housing software - I was the sole engineer responsible for the HUD federal compliance pipeline: annual income limit imports from HUD federal source data into 180,000 domain records, rent and eligibility calculations for 100K+ housing units, and every enhancement, bug fix, and regulatory update that pipeline required. I know this domain precisely because I have been maintaining and improving it in production for nearly a decade.

The work your team does is the work I have done. When HUD publishes updated income limits, someone has to write the import, validate every record, and make sure downstream rent calculations and eligibility decisions reflect the new values - with zero tolerance for errors because incorrect data means incorrect payments and compliance violations for real residents. I built and owned that system at Entrata from 2017 through 2024, and I am ready to do the same on Yardi's side of the market.

On the engineering side: I have shipped 20+ full-stack production modules using Python, PHP, PostgreSQL, MySQL, Oracle, React.js, and TypeScript across 120+ Agile sprints. I have resolved hundreds of defects, reduced triage time by 40% with internal debugging tooling, and kept bug count below 10 for six consecutive months. I have performed 200+ SQL optimizations - execution plan analysis, indexing, partitioning - resulting in a 30% performance gain across the compliance reporting layer. I document clearly, present solutions to internal teams, and mentor junior engineers. These are the exact practices your job description calls out.

I would be glad to bring this background to Yardi's HUD team and contribute from day one without a ramp-up period on the domain. Thank you for your consideration.

Sincerely,

Venkata Lakshmi Parimala Pasupuleti
