Hiring Manager, D2C ML Engineering
Sony Interactive Entertainment
San Diego, CA

Dear Hiring Manager,

I'm applying for the Software Engineer, AI/ML role on your D2C ML Engineering team. With **7+ years of experience building production systems** - and the last year focused entirely on LLM-powered services in production - I build exactly what the JD describes: AI that connects to real business data and services, ships reliably, and gets better over iteration.

At **Intuit**, I build LangChain-based services integrating Anthropic Claude into production financial workflows - tool calling, structured outputs, retrieval-grounded context, and event-driven pipelines. I also own the eval harness: CI regression gates with golden datasets and LLM-as-judge scoring so we can ship AI features confidently. That "prototype → measure → production" loop is how I operate on every AI feature. On the orchestration side, I've worked hands-on with **Model Context Protocol (MCP)** - I integrated an MCP server into LeaseI (my 8-agent LangGraph platform) for shared tool access across agents, and I understand both the design patterns and the operational tradeoffs that come with it.

Before the AI work, **7+ years at Entrata** (affordable housing SaaS, 100K+ monthly active users) gave me the production-system foundation your JD asks for: scalable microservices in Python and Java, async event-driven processing with RabbitMQ, PHI-compliant AWS integrations, and the discipline of owning critical systems without incidents. The D2C commerce domain - subscriptions, payments, player lifecycle - maps directly to what I built at Entrata and Intuit. I know how to build AI services that fit cleanly into regulated, high-availability environments.

I'm excited by PlayStation's scale and the opportunity to bring LLM-powered capabilities to a D2C commerce platform used by hundreds of millions of players. I'd welcome the chance to walk through my work. Thank you for your consideration.

Sincerely,

Venkata Lakshmi Parimala Pasupuleti
